

**ChemGrout®**

# CG-500/030 Geothermal Series

ChemGrout introduces a new high-capacity grout plant for the growing geothermal industry. The ChemGrout CG500/030 utilizes two 70-gallon mix tanks and a large 45-gallon holding hopper, feeding their patented single acting 3" piston pump. This new design provides mixing for high ratio sand/bentonite materials specified by loop designers. The CG500/030 generates continuous outputs of up to 16 gpm, pressures of 500 psi, and is available in air, hydraulic, gas and diesel.
